YOU, PLANET

50' (ENG, GER)

It's an unknown planet, yet it seems strangely familiar. But this alien planet is not from outer space. This planet is you.

Deep canyons and crevices scar the landscape, rugged mountain ranges tower over vast plains, humid jungles and acidic lakes hide creatures unknown to most –ferocious predators, peaceful grazers, cunning quick-change artists. At any given moment, we are the human habitat of 100 trillion organisms, almost all of them hidden from our naked eye.

This extraordinary 3D adventure takes us on a journey into an inner world few of us are aware of. Specially developed electron microscope imaging reveals the dramatic interactions happening in our body tissues when microbes, parasites, cells, and viruses co-operate. We will combine images from the latest scanning electron microscopes with CGI to y over micro-landscapes, and travel through cells and organs as we explore what makes this amazing ecosystem work.

Original Title:	Wir sind Planeten
Year:	2012
Produced by:	Terra Mater Factual Studios
