# EARTH: THE NATURE OF OUR PLANET

3 x 52' (ENG, GER, SPA, FRA)

**Life – its beauty, complexity and challenges – is bound to the elements.**

Across three enthralling episodes, 'Earth – The Nature of Our Planet', explores mysteries of the plant and animal kingdoms; weather and geological phenomena and nature's wonders, from the perspective of the elements. Air, Land and Water are not only the stages for this dramatic theatre of life, but dynamic spheres in their own right, connected to one another through surprising relationships.

Original Title: Die Erde - Ein Planet im Portrait

Year: 2018

Produced by: Terra Mater Factual Studios

### **1. Air**

### **2. Land**

Viewed from space, our blue planet seems so familiar that we forget how extraordinary it is.

### **3. Water**

The oceans act as a driving force for local weather phenomena and global climate change.
