# THE MOON – OUR GATEWAY TO THE UNIVERSE

50' (ENG, GER)

**The Moon has always been a focus of curiosity and yet, our neighbour in space still holds many mysteries.**

We are on the verge of a new age of exploration: besides the plans of NASA and other space agencies, over the next years also privately financed teams are going to send unmanned vehicles to the Moon. The goal is to find a cheap and efficient way to travel there on a regular basis, and in the long term to build a permanent human base.

This film explores the most recent and most spectacular scientific breakthroughs that are shedding light on the Moon's most enduring mysteries. We still have to learn a lot about the Moon, if we want it to be our stepping stone to the solar system; and one day even our gateway to the universe.

Original Title:	Der Mond - Unser Tor ins All
Year:	2018
Produced by:	Terra Mater Factual Studios, Cosmos Factory Filmproduktion
